南方醫科大學頭頸部解剖

日期: 2016年8月19日(星期四)

活動: 南方醫科大學頭頸部解剖

地點: 廣州市南方醫科大學

第九屆粵港台口腔種植高峰論壇

日期: 2016年8月19,20,21日(星期四至六)

活動: 第九屆粵港台口腔種植高峰論壇

地點: 廣州市廣東省口腔醫院

香港講者: 葉慶良醫生, 張達良醫生, 周國輝醫生

EVENING LECTURE SERIES

To save or to extract: A comprehensive assessment

Hom-Lay Wang, DDS., MSD., Ph D.

DATE : 1st JULY 2016
TIME : 7pm - Reception
7:30 - 9pm Lecture
9pm - Dinner
VENUE : Eaton Hotel Nathan Room
(380 Nathan Road, Kowloon, HK)

Abstract: Implant-supported restorations have become the most popular therapeutic option for professionals and patients for the treatment of total and partial edentulism. When implants are placed in an ideal position, with adequate prosthetic loading and proper maintenance, they can have success rates > 90% over 15 years of function. Implants may be considered a better therapeutic alternative than performing more extensive conservative procedures in an attempt to save or maintain a compromised tooth. Inadequate indication for tooth extraction has resulted in the sacrifice of many sound savable teeth. This presentation will focus in discussing when the teeth should be saved and when the teeth should be extracted and replaced with dental implants. A decision tree that can assist clinicians in making the right decision when they are deciding which route to take will be presented. To facilitate ideal implant placement as well as to enhance esthetic outcomes on the final restoration, it is very important for the clinicians to properly assess the tooth conditions before it is removed.

Speaker:

Hom-Lay Wang, DDS., MSD., Ph D.
Endowed Collegiate Professor of Periodontics
Professor and Director of Graduate Periodontics
Diplomate and Former Director & Chair,
American Board of Periodontology
Board of Director, Academy of Osseointegration

Educational objectives:

- Understand when to save and when to extract a compromised tooth
- Know extraction socket classification and decision tree for choosing certain technique for socket augmentation
